

- **Presentation Layer** : Exposes API endpoints, controllers, and services. Contains no business logic.
- **Business Logic Layer** : Contains core business rules, domain entities, and the `HBnBFacade`.
- **Facade** : Single entry point called by the presentation layer. Orchestrates application use cases.
- **Persistence Layer** : Handles repositories and ORM/storage. Contains no business logic.
- **Database** : External system accessed exclusively through the persistence layer.
